MS-1

MILK SENSOR

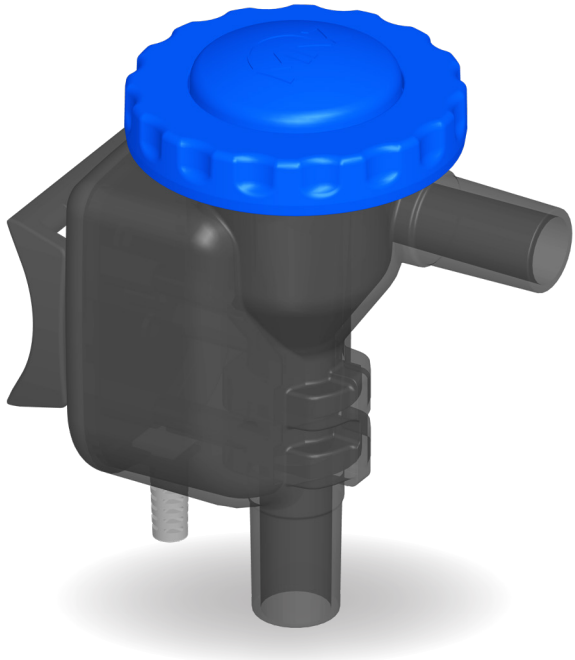
FOR HERRINGBONE AND ROTARY SHEDS

COMING SOON!

MILK SENSOR ENABLING FASTER DECISIONS

The MilktechNZ® MS-1 gives valuable real-time, individual cow monitoring for milk yield, milk conductivity, milk temperature, allowing farmers to make faster, data-driven decisions on animal health, milk quality, and production efficiency without disrupting the milking routine.

- Measures individual milk yield per animal at each milking to track performance and identify potential health issues.
- Measures conductivity for each animal at every milking. When combined with daily milk yield, can help identify udder health issues such as mastitis.
- Provides wash temperature and conductivity readings to monitor wash performance and identify potential milk quality issues before they occur.
- 100% designed and manufactured in New Zealand.



NEW ZEALAND MADE ®

MILKTECHNZ®

Simply Clever Innovation.
