MILKLINK™

Simply Clever Information.

FOR HERRINGBONE AND ROTARY SHEDS

NEW RELEASE

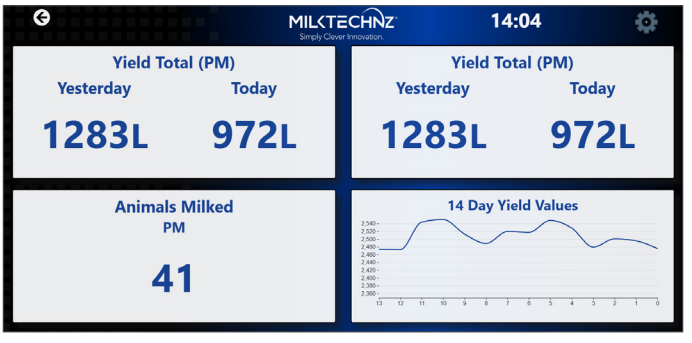
REAL-TIME SYSTEM PERFORMANCE AT A GLANCE

The MilktechNZ® MilkLink is a real-time milking dashboard that delivers milking information direct to the operator, helping dairy farmers make faster, smarter decisions in the shed. Integrating seamlessly with MilktechNZ® CR-1 cup removers, pulsator sensors, and milk sensors. MilkLink helps improve efficiency, maximise milking performance, reduce downtime, and give farmers greater control every milking session.

- Live dashboard display showing real-time milking data as it happens. Includes yield totals for both AM and PM milkings, along with graphing over the previous 14–30 days for quick performance comparison.
- Built-in data logging to track performance over time, supporting servicing decisions and early issue detection.
- Manual ID input capability allowing flexible recording of cows, milking events, or observations directly within the platform for added control and traceability.
- Available as web app, IOS app and Android app. Download on the App Store GET IT ON Google Play

CR-1 integration

MilkLink connects directly with CR-1 cup removers, providing clear visibility of milking performance and system operation across the shed. This includes insight into milking activations, highest and lowest yields, along with individual animal milking time and yield results, enabling accurate cow ranking and clear end-of-milking reasoning.

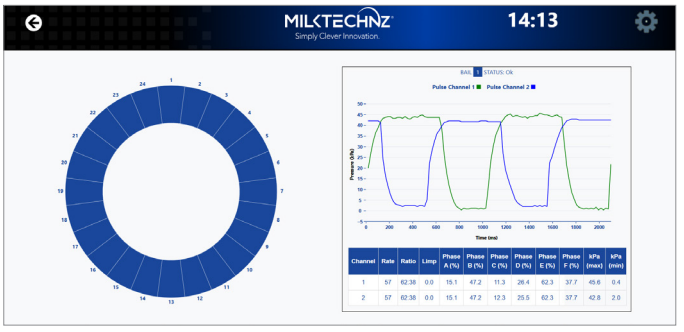


MILKLINK™

Simply Clever Information.

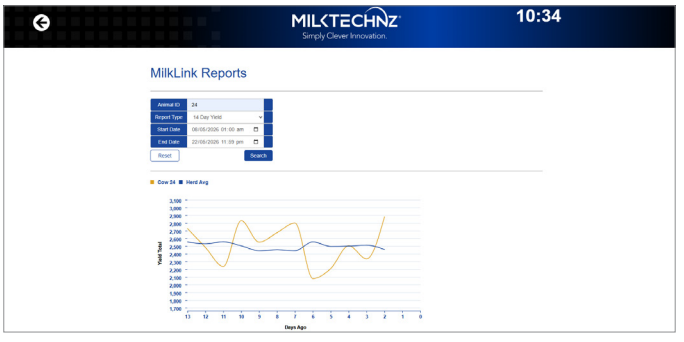
PS-1

Integration with the PS-1 Pulsator Sensor delivers live monitoring of pulsation performance, including detection of failures, performance drift, and vacuum issues. This provides real-time visibility and rapid fault identification during milking.



Reporting

MilkLink's reporting tools provide comprehensive data logging and analysis, including yield totals and milking count. This allows performance tracking over time, supports better decision-making, and helps identify issues early, with detailed insight into individual cow performance, milking activity, and system trends.



MS-1 milk sensor

MilkLink will soon integrate with the MS-1, delivering detailed insight at the individual cow level. This includes cow rankings, alerting animals, and wash fault detection, helping identify performance issues early and improve overall herd management.
