MILKHUB®

Simply Clever Milking Management.

LIC MINDA® INTEGRATION PARTNER

MilkHub now integrates with LIC MINDA®. We're excited to be pairing up so you can maximize your system's potential. Another way MilktechNZ® is helping increase our customers efficiency and productivity.

The MilkHub and MINDA® integration uses a one-way data transfer system. MINDA® sends animal data to MilkHub. All animal records and treatments entered in MINDA® are pushed down to MilkHub. Data entered into MilkHub is not pushed up to MINDA®.

WHAT TO EXPECT

- You won't have to worry about updating tags for drafting. No more double data entry.
- The in-shed display will always show the latest events.
- When you enter treatments in MINDA®, the withholds will alert in-shed.

HOW TO TURN IT ON

1. In MilkHub, navigate to Settings > Integrations > MINDA®.
2. Select which data you would like to sync (you can update this later).
3. Press the Connect with MINDA® button and follow the prompts in MINDA®.

If you have a query, please call us on 0508 645 548 or email us at support@milktechnz.com.

WHAT DATA WILL SYNC?

TAGGINGS

Every hour MilkHub will check for any changes to the herd list, updating tags (birth, electronic, and visual), breed information, and removing animals no longer present in MINDA®.

EVENTS

- *Heats and Matings* – MINDA® provides the latest heat date, mating date, and bull info.
- *Pregnancy check* – MINDA® provides the latest pregnancy check date, the result, and the expected calving date.
- *Calvings* – MINDA® provides the latest calving date which we use, but not the calves yet. If you would like to see calf information you will need to turn the calving sync off and continue to import calvings manually.
- *Body Condition Score* – MINDA® provides the latest score.

TREATMENTS AND WITHHOLDS

MINDA® provides the treatment drug, doses, diagnosis, withholds, quarters, and return to vat. MilkHub checks every five minutes and sends the withhold alerts to the shed.
